APPLICANT : NIPPON SHEET GLASS CO LTD;

INVENTOR : KITAZOE TOSHIKI;

INT.CL. : E06B 3/62 E06B 3/66

TITLE : PLATE GLASS BODY

ABSTRACT : PROBLEM TO BE SOLVED: To easily handle a plate glass body while easily and quickly holding the holding member to a plate glass main body, maintain such a holding state and easily handle the plate glass main body and a holding member combined with each other as a unit in the case the plate glass body fitted in a bearing frame body provided to an opening of a building to use is constituted.

SOLUTION: A plate glass main body 2 is elastically borne on a bearing frame body 4 in the peripheral edge section of the plate glass main body 2 formed in the bearing frame body 4 in a state capable of being fitted therein, a holding member 3 for holding between the plate glass main body 2 and bearing frame body 4 in a water-tight state is fitted, the peripheral surface of the holding member 3 to be fitted is surrounded over the overall 1 surface by a belt-shaped object 6, and the holding member 3 is held to the plate glass main body 2. As the belt-shaped object 6, a heat contractive film is used to make it possible to hold the holding member 3 to the plate glass main body 2 in a state to make the belt-shaped object 6 thermally contract, and as the belt-shaped object 6, a circular rubber belt-shaped object is used to make it possible to surround the perimeter of the holding member 3 in a state to expand the belt-shaped object 6.
